

CET Broadcast Services

CET Teleport is located near Hameln in North West Germany and has built up an enviable reputation for the high standard of service that it has provided to the users of its satellite based teleport services during the 22 years since it was built by Deutsche Telekom.

The Operations Centre offers state-of-the-art broadcast transmission services catering for both HD and SD formats and is working with a number of broadcasters and other service providers to offer DTH services in the geography which it can cover from its position in the centre of the major land masses of the world.

The teleport offers C-band, Ku-band, Ka-band and K-band uplink, downlink and turnaround services on antenna sizes from 15m to 2.8m.

The MCR and equipment rooms are purpose built for broadcast services, are fully air-conditioned and the teleport has three fully independent power sources plus UPS in the form of a substantial battery back-up system and stand-by generators.

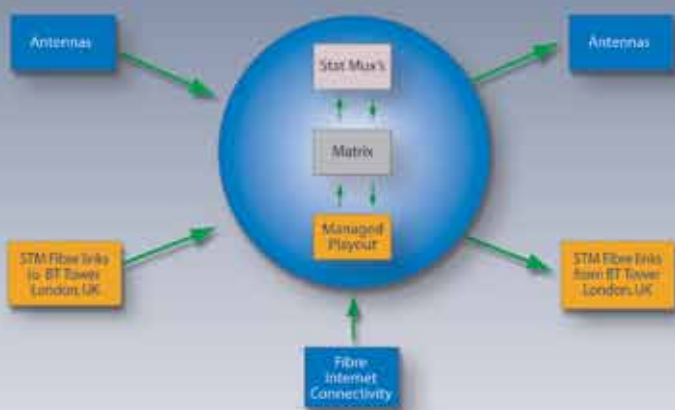

Digital Media Network

CET Teleport has direct fibre connectivity with both the BT Tower and Telehouse switching centres in London. MPLS IVNP protocol is used with ASI interfacing to offer resilient and adaptable transmission facilities. The STM fibre link is bi-directional and fully redundant.

CET has access to the BT GMN (Global Media Network) which allows for the transmission of video enabled MPLS data and voice services. This will considerably increase CET's reach and flexibility by allowing access to a world-wide fibre network. In addition, CET is negotiating similar partnerships with other major telcos and independent teleport operators so that whatever a broadcaster's requirement might be, CET will be in a position to deliver service.

CET Teleport Broadcast Connectivity

Choose CET because:

- Central European location allows the coverage of all major landmasses
- Excellent Customer Service, 24/7 MCR manned by experienced multi-lingual staff
- Fibre links provide world-wide connectivity
- Awarded Top Twenty rating by World Teleport Association
