## A comprehensive range of Broadcasting and VSAT Services

CET Teleport, one of the largest in Europe, is ideally located in northwest Germany giving it a commanding view of the skies with visibility from the east coast of Canada and the United States, through the Caribbean and down to South America, then covering Europe and Africa, all the way across Russia and China, and all of Asia, down to the west coast of Australia.

The excellent geographical location allows access to over 200 geostationary satellites\* located from 58° W to 76.5° E, providing coverage and connectivity across most of the visible globe.

*\* subject to terms and conditions*

The Teleport is host to over 50 antennas from 15m downwards operating in C, Ku, X and Ka bands.

CET Teleport operates DirectWay and iDirect VSAT hubs, has direct, on-site connectivity to the Deutsche Telekom fibre network and dedicated fibre links to Telehouse in the UK.

The teleport location provides excellent coverage and connectivity and allows CET to provide you with service solutions to match whatever your needs might be.

### Broadcast Services

CET Teleport is expanding its range of broadcast services to provide tailored solutions to broadcasting organisations across the industry. CET can offer Direct-to-Home (DTH) Multiplexed Services as well as facilities for Playout and Distribution, Turnaround and Occasional Use/SNG services.

CET can also provide access to some of Europe's premier DTH bouquets and multi-point content access and storage facilities. By using the latest hardware technology and software solutions in its studio and editing suite CET can provide content distribution globally.

### VSAT and Carrier Services

CET has the technology and expertise to provide the following services and more:

- Hubbed and SCPC VSAT Corporate and Enterprise Services
- GSM Backhaul Services
- Voice Services - Carrier and VoIP
- Disaster Recovery Networks

We can arrange local licensing, installation and maintenance with Service Level Agreements guaranteeing the highest level of availability to ensure that, whatever your application, your connection is there when you need it.

### Government, Military and NGO Services

For many years, the Hameln teleport has provided voice and data satellite services for government agencies, non-governmental organisations (NGOs) and various branches of the military.

These organisations prefer to use satellite links, even when terrestrial ones are available, because they can have not just virtual private networks (VPNs) but also highly cost-effective 'actual private networks'. In this way, they can enjoy much more secure communications over their own exclusive links than is possible using public voice and data networks.

### Teleport Services

CET Teleport also provides all the services required to ensure that you get a system that is tailored to satisfy your specific needs.

We can offer: project management, installation, licensing, field service and maintenance, network monitoring and management, third party hosting and data storage and, for satellite operators, telemetry, tracking and control (TT&C) services.
