

EUROBIRD™ 1

Premier satellite for European DTH Broadcast - Sky, Freesat and Free-To-Air

Reaching more than 10 million homes in the UK and Ireland

EUROBIRD™ 1 is located at 28.5°E which is the best orbital location for the United Kingdom & Republic of Ireland with direct access into Sky and Freesat platforms and many popular free-to-air channels.

This neighbourhood reaches the fastest growing audience in Europe, transmitting nearly 500 television, radio and interactive channels serving 10 million DTH homes and more than 3 million cable television households.

Over 50% of UK households are already served and additional growth opportunities will be available during the digital switchover in 2012.

CET can provide the complete solution for your EB-1 broadcasting - uplink, downlink and turnaround services. In addition, CET broadcast fibre connects Central London to over 70 additional locations around the world. It utilises a state-of-the-art multi-protocol label switching (MPLS) enabled IP network designed specifically for business-grade broadcast traffic.

Whether you are a single channel niche market content provider or a large multi-channel operator, CET will ensure that you get cost-effective delivery and flexible access.
